Tutor
Rafaella Antonyan

Submission Date
13.11.2015

- Purpose: This document contains the agenda of the client meeting and functionality required for the automated core course scheduling project.
- Meeting with the Customer:
    - We have discussed about the description of the project including Software Requirements Specifications (SRS) and Software Design Specifications.
    - We have received sample of schedules and discussed how the use cases should be.

- Work partitioning: Group members discussed and divided the tasks amongst themselves. This includes use-case description, requirement specifications, sequence diagram and prototyping. Each of the subgroup will compile their respective parts and we will have weekly or biweekly meetings.
